Free Custom Domain Email Setup Guide

Cloudflare Email Routing, Google 16-Digit App Password & Gmail SMTP Configuration

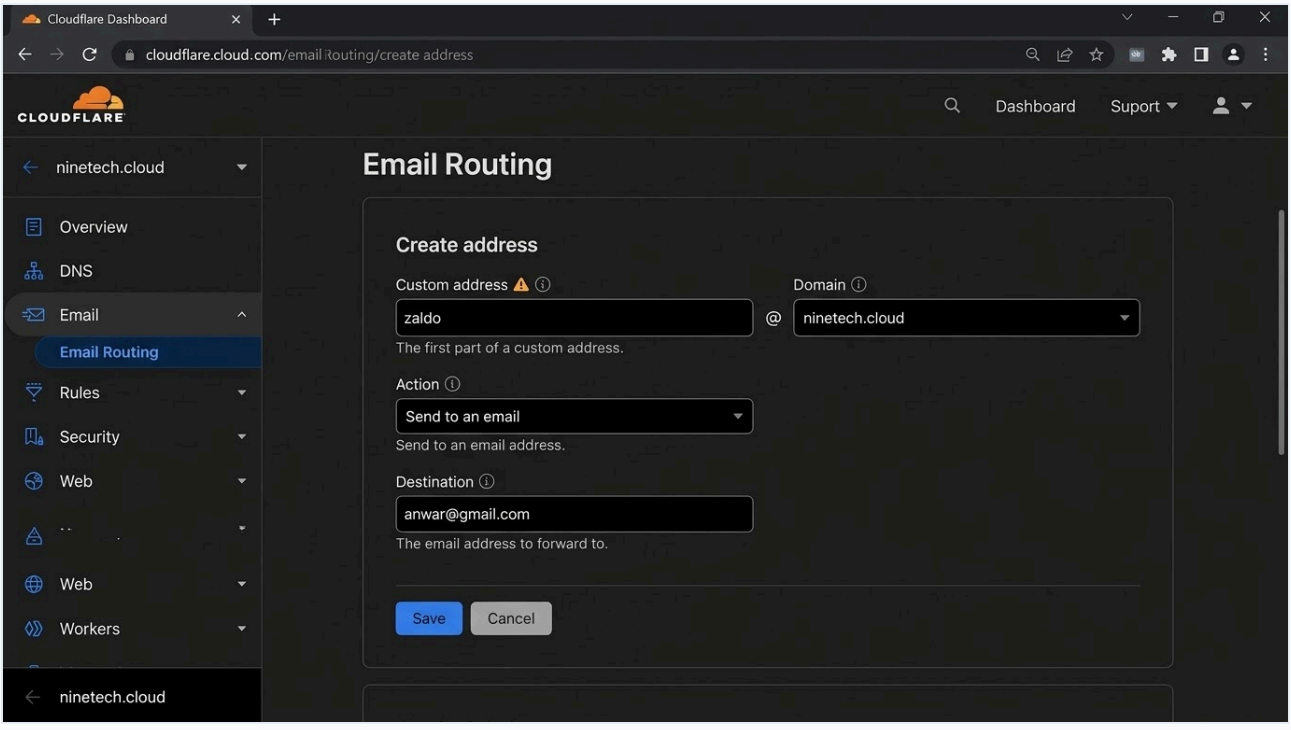

Custom Domain	Cloudflare Routing	Personal Gmail
zaldo@ninetech.cloud Forever Free	**100% Free Bridge** Incoming Mail Forwarding	**anwar@gmail.com** Send & Receive in One Inbox

1. Cloudflare Email Routing (Incoming Emails Ke Liye)

Apne domain ki saari mails personal Gmail par forward karne ke liye:

1. **Cloudflare Dashboard** → Domain (`ninetech.cloud`) → **Email** → **Email Routing** me jayein.
2. **"Enable Email Routing"** par click karke DNS records automatically add kar dein.
3. **Routing rules** tab me **"+ Create address"** par click karein:

Custom Address	Action	Destination
`zaldo@ninetech.cloud`	Send to	`anwar@gmail.com` (Aapka personal Gmail)

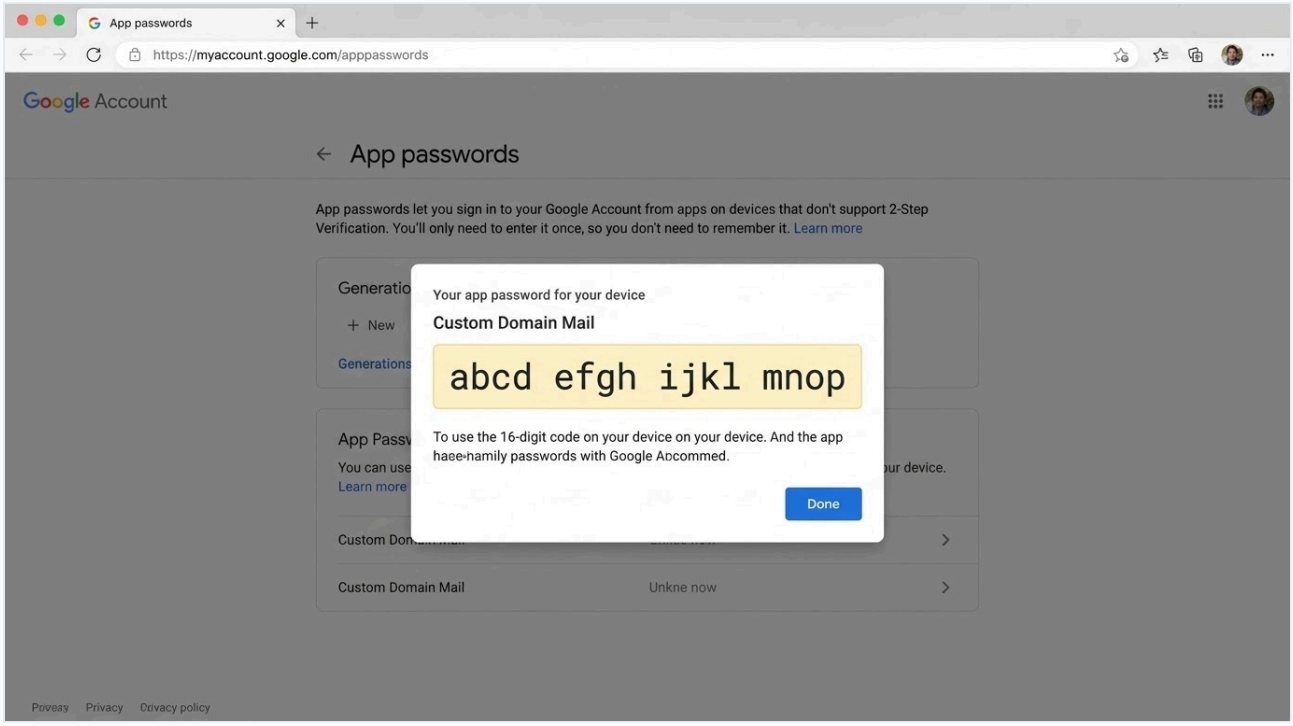

Cloudflare Email Routing me custom address (zaldo@ninetech.cloud) aur destination Gmail fill karke Save karein.

4. Gmail me verification mail aayegi, link par click karke verify karein. Incoming ready!

2. Google 16-Digit App Password (Outgoing Sending Authorization)

Gmail se custom email ka reply bhejne ke liye 16-letter secure code generate karein:

1. Browser me open karein: `myaccount.google.com/apppasswords` (**2-Step Verification** ON honi chahiye).
2. App Name me type karein: `Custom Domain Mail` → Click **"Create"**.
3. Yellow box me jo 16-character code aayega (`abcd efgh ijkl mnop`) use copy karein:

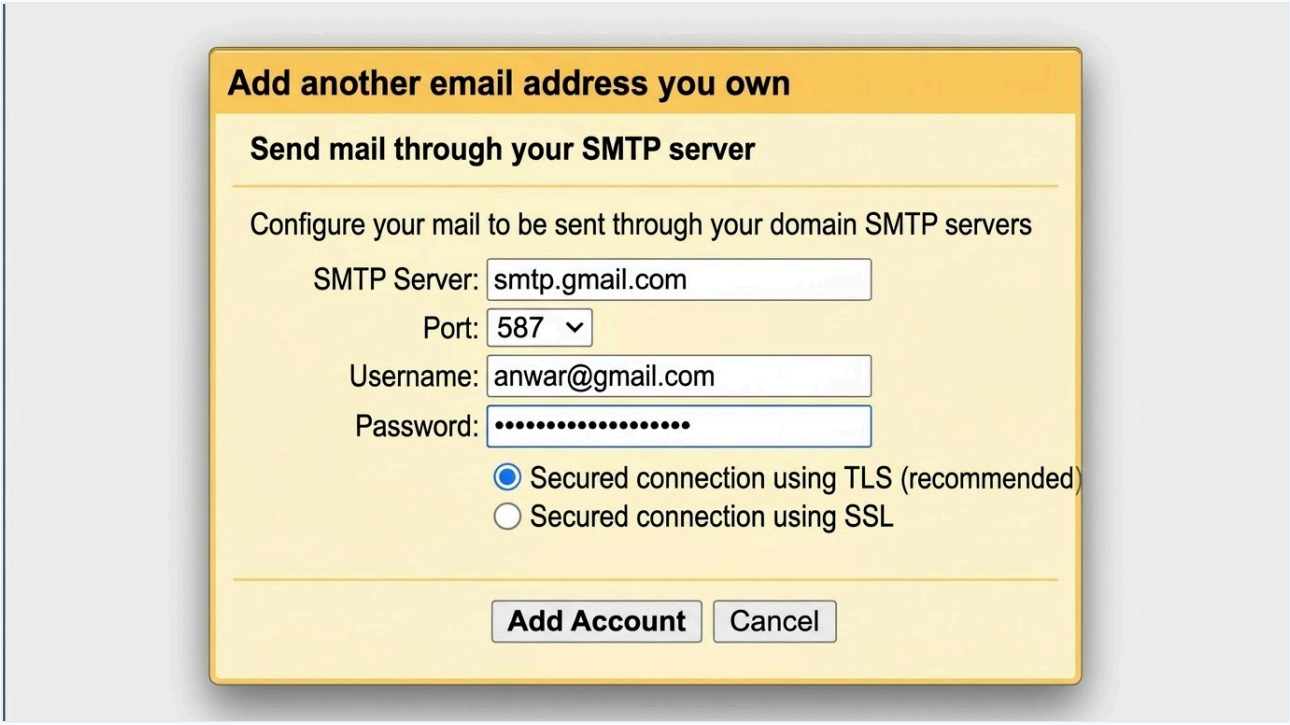

Google App Passwords me generate hua 16-character code copy karein.

3. Gmail SMTP Setup (Directly zaldo@ninetech.cloud Se Bhejne Ke Liye)

Gmail desktop browser me apna custom email configure karein:

1. Gmail **Settings** → **See all settings** → **Accounts and Import** tab me jayein.
2. **"Send mail as:"** ke samne **"Add another email address"** par click karein.
3. Name: `Anwar` | Email: `zaldo@ninetech.cloud` → **Next Step**.
4. SMTP Configuration Table ke anusaar details bharein:

SMTP Server	Port	Username	Password	Security
`smtp.gmail.com`	`587`	`anwar@gmail.com`	Step 2 ka 16-digit code	TLS (recommended)

Gmail SMTP form me smtp.gmail.com, Port 587, Gmail Username aur 16-digit App Password fill karke Add Account par click karein.

5. **"Add Account"** par click karein aur Gmail me aaye verification code ko enter karein.

> **1-Click Pro Setting:** Gmail **Settings** → **Accounts and Import** → *"When replying to a message"* me select karein: **"Reply from the same address the message was sent to"**. Isse corporate mail ka reply automatically corporate mail se hi jayega.

PART 2 — OPTIONAL UPGRADE: STOP "VIA GMAIL.COM" & PREVENT SPAM

Official Brevo DKIM Authentication + Gmail SMTP Relay

Agar aap chahte hain ki recipient ko email ke saath *"via gmail.com"* na dikhe aur aapki mails spam folder me na jayein, toh neeche diya gaya Brevo.com setup follow karein (300 emails/day free forever):

Step 1: Brevo Me Apna Domain Add Karein (Free)

1. `brevo.com` par free account banayein (300 emails/day free forever).
2. Top-right profile menu → **Senders & Domains** → **Domains** tab par jayein.
3. **"+ Add a domain"** par click karein aur apna domain enter karein (e.g., `ninetech.cloud`).

Step 2: Cloudflare DNS Me Official DKIM, SPF aur DMARC Records Add Karein

`dash.cloudflare.com` open karein, apna domain select karein aur **DNS** → **Records** me ye 3 TXT records add karein:

Type	Name / Host	Content / Value	Proxy Status
TXT	`mail._domainkey`	`k=rsa; p=MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQ...` (Brevo DKIM Signature)	DNS only
TXT	`@` (root)	`v=spf1 include:spf.brevo.com include:_spf.mx.cloudflare.net -all`	DNS only
TXT	`_dmarc`	`v=DMARC1; p=none; sp=none;`	DNS only

Records save karne ke baad Brevo dashboard me wapas jayein aur **"Authenticate this domain"** par click karein jab tak status **[Authenticated / Active]** na dikhne lage.

Step 3: Brevo Master SMTP Key Generate Karein

1. Brevo top-right menu → **SMTP & API Keys** (`app.brevo.com/settings/keys/smtp`) me jayein.
2. **"Generate a new SMTP key"** button par click karein.
3. Key name daalein: `Gmail SMTP Relay` aur **Generate** par click karein.
4. Generate hui Master Key (e.g., `xsmtps-8f92a1bc3d4e5f6a...`) copy kar lein. Yeh key agle step me password ki jagah use hogi.

Step 4: Gmail Settings Me Brevo SMTP Relay Connect Karein

1. `mail.google.com` → **Settings** → **See all settings** → **Accounts and Import** tab me jayein.
2. **"Send mail as"** me **"Add another email address"** par click karein (ya purane address ko edit karein).
3. Name: Apna naam | Email: `support@yourdomain.com` (ya `zaldo@ninetech.cloud`) → Uncheck **"Treat as an alias"** → **Next Step**.
4. Form me Brevo SMTP credentials enter karein:

SMTP Server	Port	Username	Password
`smtp-relay.brevo.com`	`587` (TLS)	Brevo login email	Brevo Master SMTP Key (`xsmtps-...`)

5. **"Add Account"** par click karein. Gmail aapke custom email par confirmation code bhejega (jo aapke Gmail inbox me forward hokar aayega). Code enter karke **Verify** karein.

Live Verification Checklist (Confirm Karein Ki Sab Sahi Kaam Kar Raha Hai)

Apne custom domain email se kisi bhi doosre email par test message bhejein, aur received email me **"Show details (to me ▾)"** par click karke niche diye gaye 4 points verify karein:

Verification Field	Expected Result
signed-by	`yourdomain.com` (e.g., `ninetech.cloud`) **[PASS]**
security	TLS Secured (Standard encryption)
via gmail.com	NONE (100% Gayab)
Destination	Primary Inbox (No Spam)
